

TaskTracker Instructions

Check PyCharm Version

Make sure you are using the latest stable release of **PyCharm Community Edition** or **PyCharm Professional Edition** (version 2024.3.5 as of March 23, 2025)

To check this:

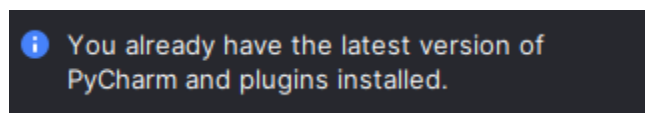

- Click on the  to open the **Main Menu**
 - o On Mac, this will be in the top menu bar in **PyCharm -> About PyCharm**.
- Go to on Help -> About to get the below pop-up:

If it is not up-to-date, update your PyCharm installation by doing the following:

- Click on the  to open the **Main Menu**
- Go to **Help -> Check for Updates...**
 - o On Mac, this will be on the top menu bar

If you receive the following pop-up on the bottom of your screen, your PyCharm is already up-to-date:

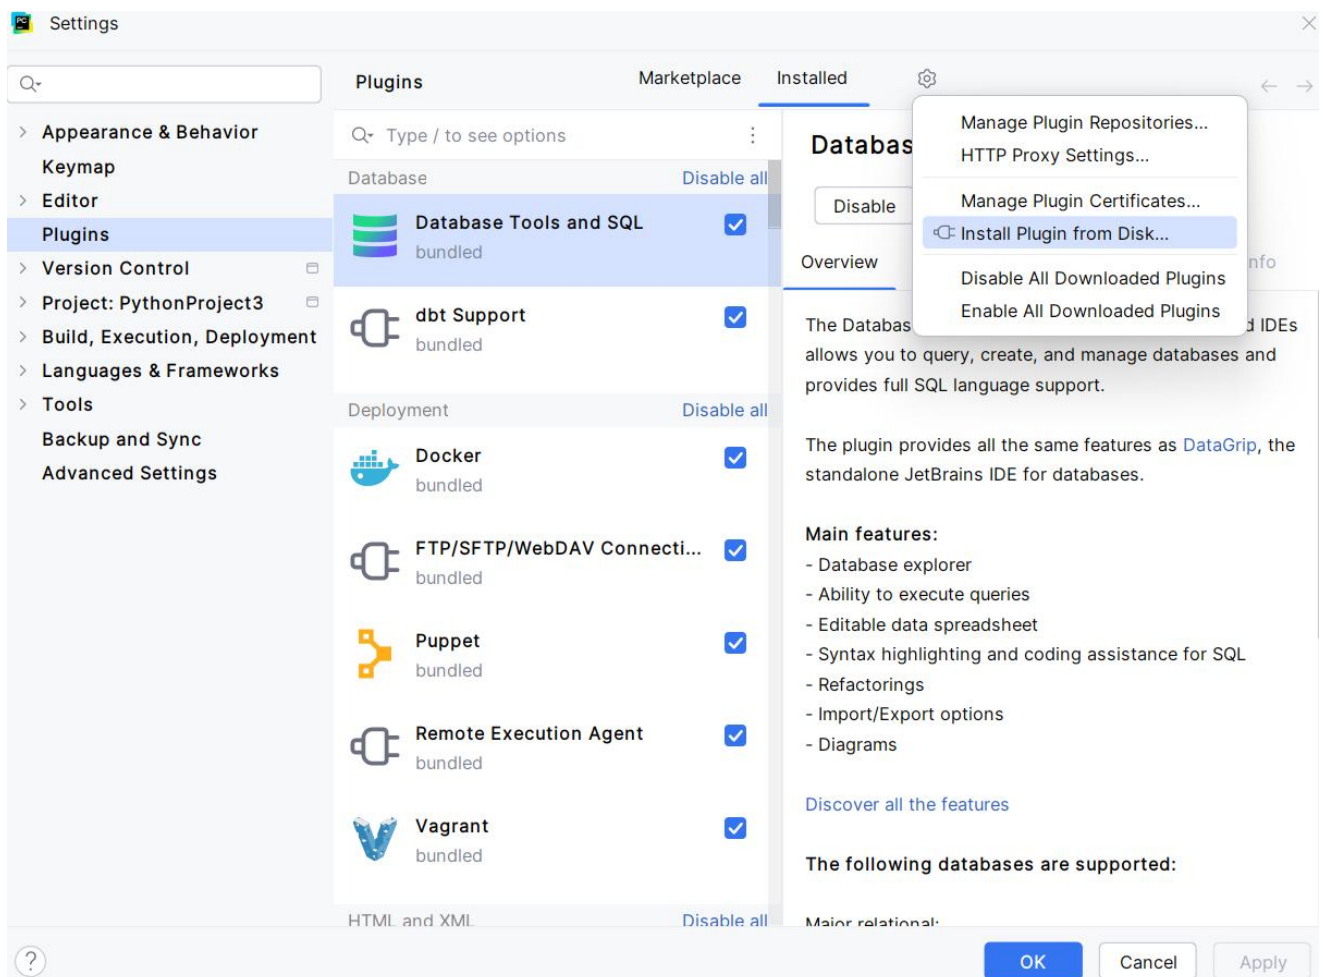

Installing TaskTracker

To install **TaskTracker**, go to the [Google Drive](#) link provided to you.

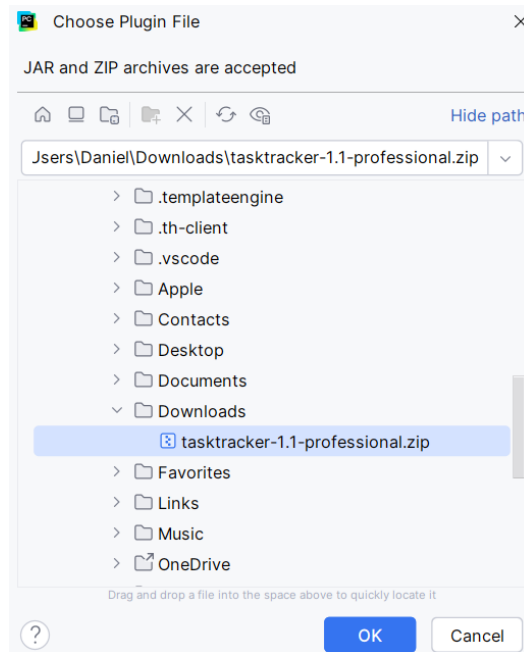

- Download the version of **TaskTracker** that matches your version of PyCharm:
 - o **tasktracker-1.1-community.zip** if you are using **PyCharm Community Edition**
 - o **tasktracker-1.1-professional.zip** if you are using **PyCharm Professional Edition**
- Save the zip file in a location where you can find it

Open your course project in PyCharm and install the plugin.

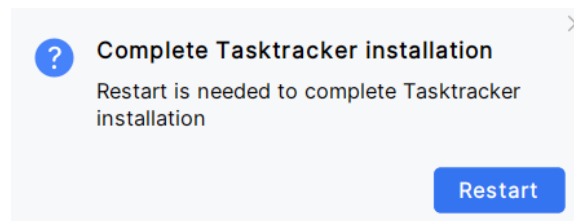

- In PyCharm, click on the  icon and select **Plugins...** to open the Plugins menu
- Click on the  icon in the Plugins menu and select **Install Plugin from Disk...**

- Locate the **tasktracker-1.1-community.zip** or the **tasktracker-1.1-professional.zip** in the file explorer and click **OK**

- Click **OK** in the plugins window to begin the installation. This will install **TaskTracker** and two of its dependencies – Activity Tracker and JavaFX Runtime for Plugins
- After a few moments, you should receive a prompt to restart PyCharm to complete the installation. Click **Restart** to proceed.

- After a moment, PyCharm should reload with **TaskTracker** installed. Please restart manually a second time to avoid a runtime issue. Once you have restarted a second time, **TaskTracker** should be functional

Using TaskTracker

Survey

Once **TaskTracker** is installed, it will be accessible on the right side of PyCharm and can be found with this icon  and will look like the image below:

TaskTracker

enter your survey pin: _____

start the
session

- In the survey pane, you will be asked to enter your PIN from the survey you completed earlier. Please enter it in the field above and click **start the session** when you are done.

Task Selection

The next screen you will see is Task Selection. There are three tasks to complete and they are focused on three forms of code coverage you have seen in the course – branch, path, and statement coverage.

To select a task:

- Click on the combo box under **choose the task**. You will be able to select one of the three options:

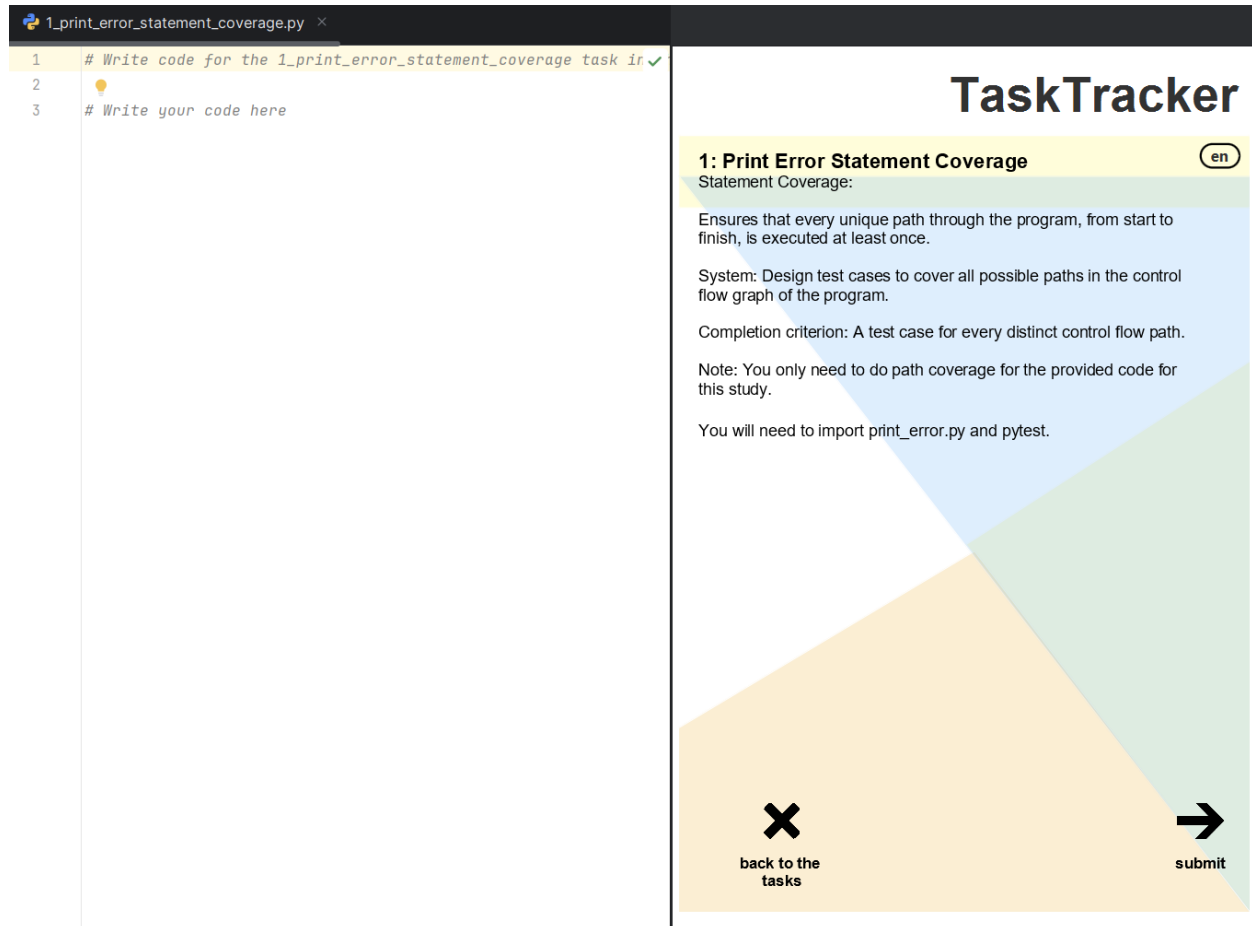

The screenshot shows the 'TaskTracker' application window. At the top, there is a title bar with a back arrow on the left and a language selector 'en' on the right. Below the title bar, the text 'choose the task:' is displayed. Underneath, there is a dropdown menu with four options: '1: Print Error Statement Coverage', '2: Read Statement Coverage', '3: Write Branch Coverage', and '4: Read Path Coverage'. To the left of the dropdown, there is a vertical text label 'After create you submit'. To the right, there is a vertical text label 'will be here nit to'. Below the dropdown, there is a note: 'Note: We only track the changes in the files created by the plugin, other files are not considered. The data will not be sent until you press submit.' At the bottom left, there is a large 'X' icon and the text 'finish the session'. At the bottom right, there is a right arrow icon and the text 'start solving'.

- After you select a task, click on **start solving** to work on it.

Solving a Task

- When you are solving a task, please prevent leaving comments such as your name and student number and write your code below the comment # Write your code here
- The files are stored in the **tasktracker** directory in the root of your project and each task can only be edited when the task is selected in **TaskTracker**.
- You can write and execute the code with no interruption

NOTE: When you are done the task, please make sure to back up your file in a separate location before submitting it. The files can be found in the **tasktracker** directory which is found in the root of the project.

The screenshot shows the PyCharm IDE with a file named `1_print_error_statement_coverage.py` open in the editor. The code contains two comments: `# Write code for the 1_print_error_statement_coverage task in` and `# Write your code here`. To the right of the editor is the **TaskTracker** plugin window. The window title is **TaskTracker**. The main heading is **1: Print Error Statement Coverage** with a language selector set to **en**. Below the heading, the text reads: **Statement Coverage:** Ensures that every unique path through the program, from start to finish, is executed at least once. System: Design test cases to cover all possible paths in the control flow graph of the program. Completion criterion: A test case for every distinct control flow path. Note: You only need to do path coverage for the provided code for this study. You will need to import `print_error.py` and `pytest`. At the bottom of the window, there are two buttons: **back to the tasks** (with a back arrow icon) and **submit** (with a forward arrow icon).

To submit the code, click **submit** in **TaskTracker**.

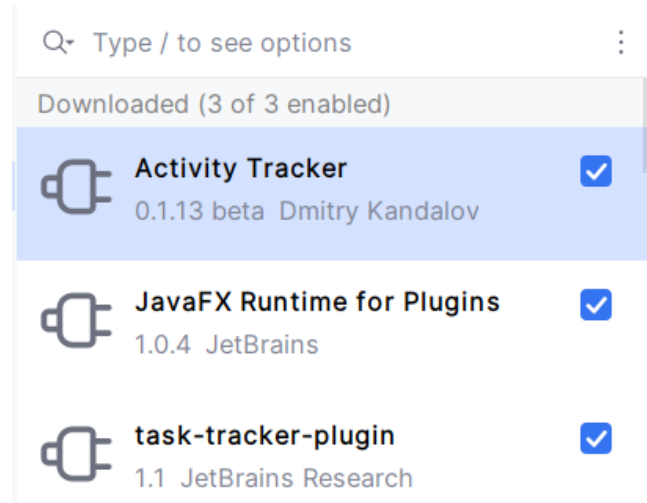

After it has been submitted, you will see the screen below. Click on **back to the tasks** to begin another task. This will return you to the task selection.

Uninstalling TaskTracker

Once the tasks have been completed, you can uninstall **TaskTracker**.

- Click on the  icon at the top of PyCharm and select **Plugins...**

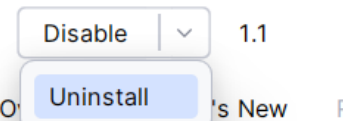

You will see three plugins to uninstall: **Activity Tracker**, **JavaFX Runtime for Plugins**, and **task-tracker-plugin**.

- On each of the plugins, click the  and select **Uninstall**

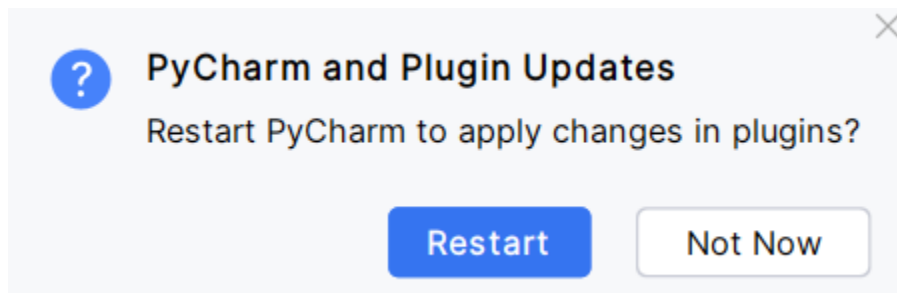

task-tracker-plugin

JetBrains Research

- Repeat this process for all three plugins

After all the plugins have been uninstalled, PyCharm will prompt you to restart.

Click **Restart** to restart PyCharm. When it reloads, **TaskTracker** will be removed from PyCharm.
